SETTING
1.All clear

Sensor

Before using the computer, please thoroughly read this manual and keep it for future reference.

WARNING / CAUTION

- Do not concentrate on the computer while riding. Ride safely!
- Install the magnet, sensor, and bracket securely. Check these periodically.
- If a child swallows a battery, consult a doctor immediately.
- Do not leave the computer in direct sunlight for a long period of time.
- Do not disassemble the computer.
- Do not drop the computer to avoid malfunction or damage.
- When cleaning the computer, bracket and sensor, do not use thinners, benzene, or alcohol.
- Dispose of used batteries according to local regulations.
- LCD screen may be distorted when viewed through polarized sunglass lenses.

Wireless Sensor

The sensor was designed to receive signals within a maximum range of 70 cm, to reduce chance of interference. When adjusting the wireless sensor, note the following:

- Signals cannot be received if the distance between the sensor and the computer is too large.
- The receiving distance may be shortened due to low temperature and exhausted batteries.
- Signals can be received only when the back of the computer is facing the sensor.
- Interference may occur, resulting in incorrect data, if the computer is:
 - Near a TV, PC, radio, motor, or in a car or train.
 - Close to a railroad crossing, railway tracks, TV stations and/or radar base.
 - Using with other wireless devices in close proximity.

Install the sensor and magnet

- A** The distance between the computer and the sensor must not exceed the transmission range of 70 cm. The back of the computer must face the sensor.
 - B** The magnet passes through the sensor zone.
 - C** The clearance between the sensor and magnet is 5 mm or less.
- * The magnet may be installed anywhere on the spoke if the above installation conditions are satisfied.

Element names

- Current speed**
 - Sensor signal icon**
Flashes in synch with a sensor signal.
 - Speed unit km/h mph**
 - Pace arrow**
Indicates whether the current speed is faster (▲) or slower (▼) than the average speed.
 - Selected mode**
Indicates the data currently selected.
 - TM**.....Elapsed Time **DST**..... Trip Distance
 - AV***.....Average Speed **MX**..... Maximum Speed
 - CAL**.....Calorie Consumption **CO2**..... Carbon offset
 - ODO**.....Total Distance **☑**..... Clock
- *1 When **TM** exceeds about 27 hours, or **DST** exceeds 999.99 km, **E** will appear. Reset the data.

Battery case cover

Starting/Stopping measurement

Measurements start automatically when the bicycle is in motion. During measurement, **km/h** or **mph** flashes.

Switching computer function

Pressing **MODE** switches the measurement data at the bottom in the order of **OPERATION FLOW**.

Resetting data

Pressing and holding **MODE** on the measuring screen returns the measurement data to 0. The odometer is not reset.

Power-saving mode

If the computer has not received a signal for 10 minutes, power-saving mode will activate and only the clock will be displayed. When the computer receives a sensor signal, the measuring screen reappears. If another 2 weeks' inactivity elapsed, **SLEEP** will be displayed on the screen. Pressing the **MODE** in **SLEEP** mode brings up the measuring screen.

Calorie Consumption *2

The calorie consumption data is only the accumulated value that is calculated from the speed data of every second. It differs from the actual consumed calorie.

Speed	10 km/h [mph]	20 km/h [mph]	30 km/h [mph]
Kcal per hour	67.3 kcal [155.2 kcal]	244.5 kcal [768.2 kcal]	641.6 kcal [2297.2 kcal]

How to calculate the Carbon offset *3

The Carbon offset are calculated as follows.
Trip distance (km) x 0.15 = Carbon offset (kg)
* This factor of 0.15 is determined by applying the average value of the overall gasoline-powered passenger cars in 2008 to the equation of the "Carbon offset from 1km drive of a gasoline-powered car" described on the website of the Ministry of Land, Infrastructure and Transport and Tourism.

Maintenance

To clean the computer or accessories, use diluted neutral detergent on a soft cloth, and wipe it off with a dry cloth.

Replacing the battery

- Computer**
When the display appears dim, or the computer hardly receives a sensor signal, replace the battery. Install a new lithium battery (CR2032) with the (+) side facing upward.
* After replacing the computer battery, follow the procedure described in **SETTING**.
- Sensor**
When the speed is not displayed even after adjusting correctly, replace the battery. After replacement, check the positions of the sensor and magnet.

Troubleshooting

The sensor signal icon does not flash (the speed is not displayed). (Move the computer near the sensor, and turn the front wheel. If the sensor signal icon flashes, this trouble may be a matter of transmission distance due to battery drain, but not any malfunction.)

- Check that the clearance between the sensor and magnet is not too large. (Clearance: within 5 mm)
- Check that the magnet passes through the sensor zone correctly. Adjust the positions of the magnet and sensor.
- Is the computer installed at the correct angle? Back of computer must face toward the sensor.
- Check that the distance between the computer and sensor is correct. (Distance: within 20 to 70 cm)
- Install the sensor within the specified range.
- Is the computer or sensor battery weak? In winter, battery performance diminishes. Replace with new batteries. After replacement, follow the procedure "Replacing the battery".

No display.

- Is battery in the computer run down? Replace it with a new battery. After replacement, follow the procedure described in **SETTING**.

Incorrect data appear.

- Follow the procedure described in **SETTING**.

Specification

- Battery**
Computer: Lithium battery (CR2032) x 1
Sensor : Lithium battery (CR2032) x 1
- Battery life**
Computer: Approx. 1 year (If the computer is used for 1 hour/day; the battery life will vary depending on the conditions of use.)
Sensor : Unit Total Distance reaches about 10000 km (6250 mile)
* This is the average figure of being used under 20 °C temperature and the distance between the computer and the sensor is 65 cm.
- Controller**.....4 bit, 1-chip microcomputer (Crystal controlled oscillator)
- Display**.....Liquid crystal display
- Sensor**.....No contact magnetic sensor
- Transmission distance**...Between 20 and 70 cm
- Tire size to be selected**
.....26", 700c, 27", 16", 18", 20", 22" and 24", or tire circumference of 100 cm - 299 cm (initial value: 26 inch)
- Working temperature**
.....32 °F - 104 °F (0 °C - 40 °C) (This product will not display appropriately when exceeding the Working Temperature range. Slow response or black LCD at lower or higher temperature may happen respectively.)
- Dimensions/weight**
Computer : 2-3/16" x 1-15/32" x 5/32" (55.5 x 37.5 x 18.5 mm) / 0.99 oz (28 g)
Sensor : 1-41/64" x 1-3/8" x 19/32" (41.5 x 35 x 15 mm) / 0.53 oz (15 g)
* The factory-loaded battery life might be shorter than the above-mentioned specification.
* The specifications and design are subject to change without notice.

LIMITED WARRANTY

2-Year Computer/Sensor only (Accessories/Bracket sensor and Battery Consumption excluded)
CatEye cycle computers are warranted to be free of defects from materials and workmanship for a period of two years from original purchase. If the product fails to work due to normal use, CatEye will repair or replace the defect at no charge. Service must be performed by CatEye or an authorized retailer. To return the product, pack it carefully and enclose the warranty certificate (proof of purchase) with instruction for repair. Please write or type your name and address clearly on the warranty certificate. Insurance, handling and transportation charges to CatEye shall be borne by person desiring service.
For UK and REPUBLIC OF IRELAND consumers, please return to the place of purchase. This does not affect your statutory rights.
